One Systems Speakers Installed in Austrian Sports and Leisure Centre

Nashville, Tennessee – Elektro Schartner of Großarl, Austria recently installed One Systems' 208CIM speakers in Großarl's newly-constructed sports and leisure centre. The system's installation included design and hanging of a cluster of speakers in the recently constructed soccer field, which serve as the main loudspeakers for announcements and music playback for games and other events.

Großarl's leisure centre is already a popular local and tourist attraction, with a variety of entertainment for both young and old. Located in Großarl, Austria, 70 km (42 miles) from Salzburg at the base of the Austrian Alps, this year-round centre includes activities such as: beach volleyball, tennis, miniature golf, a soccer field, an adventure pool and the Children's Adventure Land. Children's Adventure Land, a special highlight of the newly-built centre, includes a mini farm, a petting zoo, mountain lakes and dams, go-cart tracks, climbing walls and underground tunnels.

Once the soccer field, located adjacent to the adventure pool was complete, investors realized that permanent, cost-effective and reliable speakers were needed for music playback and announcements during games and other events. Kleinhappl Electronic GmbH from Salzburg (Austria) and project manager Matthias Hartl were awarded the contract to design the new system. They chose One Systems speakers for this particular project based on many factors, including successful past experiences.

Hartl reflects, “When we were asked to choose a speaker for this particular installation our parameters included price, sound quality, weather proofing and reliability. One Systems met all the requirements, and having worked with them in the past, we have yet to be disappointed. Due to unpredictable weather and various precipitation, One Systems has proven to be the best choice with their high vocal intelligibility, excellent sound quality and weatherproof design, not to mention their high-value price.”

For the installation, Kleinhapfl and Hartl worked closely with their local partner Elektro Schartner to design a system, which would avoid sonic reflections and feedback between the wireless microphone system and the speakers. To achieve this, they used **208CIM**’s pole-mounted as a cluster onto an existing lighting structure in order to produce effective coverage with the fewest problems. “The customer trusted our recommendation, and after installation the client expressed their pleasure with the price, appearance and performance of One Systems speakers,” states Hartl.

One Systems President, Doug MacCallum comments, “One Systems strives for the best full-bandwidth audio reproduction possible for both music and speech. Our speakers all feature weatherproof enclosures that have a five-year warranty, but also provide a high-quality of UV resistance, which will serve the Leisure Centre in Großarl perfectly.”
